Sheet metal working of finishing hardware

Integrated system from programming to leaser processing and bending

Technological strength

Technological strength backed by receiving the award of Minister of Health, Labour and Welfare

Their "Closing bending of R" received the award of Minister of Health, Labour and Welfare which is the most significant prize at "The 33rd Precision Sheet Metal Technology Fair" (2021) organized by Amada school which managed by a major sheet metal working machine manufacturer "AMADA CO., LTD.". At first glance, it seems complex shape which is very difficult to be processed

from a piece of plate, but they succeeded to produce it by elaborate calculations and their creativity. It's very rare that minor enterprises, which have just about 20 employees, to receive this award. That's how high their technical level is. In the background of it, there is 5S activity to organize their company. At first, the company couldn't obtain the understanding of labors and it took over 10 years, but now it's completely established by entering of young employees. not only processing industry but also, they express a willing of development of their in-house products in the future.
